

CLEANAREA

CLEANAREA is a device already integrated in the LEDA vending machine to sterilise the water dispensing area and with a special patented process, to sterilise flasks/bottles and containers. Considering the event of the moment, we wanted to make the device autonomous so that it can be fitted to any vending machine and sterilise the product withdrawal areas that are subject to infection by several people. It is also effective for odours and waste water in vending machines, sterilising bacteria, viruses and mould spores. Ozone is the strongest technically available and most efficient disinfectant. At the same time it is the most environmentally friendly medium, because it consists of only three oxygen atoms and carries no other chemicals.

TECHNICAL CHARACTERISTICS

- OZONE 300 mg/h
- Programmable timer with up to 10 different cycles per day cycles per day
- Battery life 2 years
- Power supply: 230V - 50Hz
- Max. Power consumption: 7 Watt
- Dimensions: H cm 4, W cm 14, D cm 10
- Weight: 450 g

Recommended programmes

Compartment withdrawal	Time Ozone
Cycles 20 min.	5 sec.
